SteelCloud Simplifies Red Hat Linux STIG Remediation with ConfigOS

Zero-client Solution Extends Enterprise STIG Compliance Automation

Ashburn, Virginia – November 12, 2014 -- SteelCloud LLC announced today the introduction of its ConfigOS STIG compliance solution for the automated remediation of Red Hat Linux systems. This newest version of its ConfigOS IA automation tool was developed with a “zero-client” architecture. All policy remediation activities can be performed across the customer’s network without the need to load a client on the target Red Hat Linux systems. Initially released with STIG signatures, ConfigOS for Red Hat Linux can easily conform to the security policies of any government or commercial enterprise.

ConfigOS is a revolutionary tool for automating ongoing STIG policy remediation for Microsoft Windows and Linux environments. ConfigOS utilizes new patent-pending technology to automate the remediation of production servers using simple, but secure XML policy signatures. SteelCloud’s ConfigOS “Builder” technology automates the hardening of a system around an application in under an hour. ConfigOS has been designed to use with physical, virtualized, and cloud infrastructures.

“We have gained significant insight into the customer requirements for STIG remediation over the past six years,” said Brian Hajost, SteelCloud President and CEO. “By reducing weeks of tedious security work to a matter of minutes, ConfigOS is able to meet the government’s stringent security standards at a much lower cost. With the addition of Linux support, ConfigOS can now automate and simplify ongoing STIG compliance for the entire enterprise.”

ConfigOS is available on GSA and other BPAs. To receive more information, please contact SteelCloud or visit the Company’s web site at <http://www.steelcloud.com>. Video demonstrations of ConfigOS STIG remediation for Windows and Red Hat Linux are also available on its website at [About Us](#).

About SteelCloud

SteelCloud develops security compliance solutions for government customers and those technology providers that support the government. Our products include “gold disks” for AWS cloud and private infrastructures as well as automated policy and security remediation tools that

reduce the complexity, effort, and expense of meeting government security mandates. SteelCloud has delivered security policy-compliant solutions to military components around the world which simplify implementation and ongoing security and mission support. SteelCloud products are available on GSA and other BPAs as well as through the AWS Marketplace. SteelCloud can be reached at (703) 674-5500. Additional information is available at www.steelcloud.com or by email at info@steelcloud.com.
